

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) An electro-optical ~~device~~ device, comprising:  
a substrate;  
a plurality of first electrodes disposed in an effective region ~~on a~~ on the  
substrate;  
a second electrode acting as a common electrode ~~for a~~ for the plurality of the  
first electrodes;  
a plurality of electro-optical ~~elements~~ elements, each being disposed between  
the second electrode and the corresponding first electrodes;  
first wiring lines ~~for applying to~~ to apply power-supply voltages to the first  
electrodes; and  
a second wiring line, connected to the second electrode, lying between the  
effective region and at least one of a plurality of sides of the substrate, an  
~~wherein the area of the second wiring line disposed on the substrate is being~~  
larger ~~than the~~ than a total area of parts of the first wiring lines, the parts being disposed  
outside the effective region on the substrate.
2. (Currently Amended) The electro-optical device according to Claim 1,  
~~wherein the second wiring line has~~ having a portion ~~having that has~~ a width larger than ~~that a~~  
width of the first wiring lines.
3. (Currently Amended) The electro-optical device according to Claim 1,  
~~wherein the~~ a width of the entire second wiring line ~~is being~~ larger than ~~that a~~ width of the  
first wiring lines.

4. (Currently Amended) The electro-optical device according to Claim 1,  
~~wherein a each of the plurality of the~~ electro-optical elements ~~are each being~~  
placed between the second electrode and the corresponding first ~~electrodes~~ electrodes, and  
each ~~include~~ including corresponding light-emitting layers that emit light when currents are  
applied between the second electrode and the corresponding first electrodes,  
~~a plurality of the plurality of~~ electro-optical elements ~~include~~ including a  
plurality of types of elements classified depending on the color of light emitted from the light-  
emitting layers, and  
the first wiring lines ~~are~~ being arranged depending on the color of emitted  
light.

5. (Currently Amended) The electro-optical device according to Claim 4,  
~~wherein the width a width~~ of the second wiring line disposed outside the effective region is  
being larger than ~~the a~~ width of part of one of the first wiring lines arranged depending on the  
type of the electro-optical elements, the part being disposed outside the effective region, the  
one being the widest of the first wiring lines.

6. (Currently Amended) The electro-optical device according to Claim 1,  
~~wherein the substrate has~~ having a dummy region ~~dispose~~ disposed between the effective  
region and at least one of a plurality of sides of the substrate, and  
the first wiring lines and the second wiring line ~~are~~ being arranged between the  
dummy region and at least one of a plurality of sides of the substrate.

7. (Currently Amended) The electro-optical device according to Claim 6,  
~~wherein the second electrode eovers~~ covering at least the effective region and the dummy  
region.

8. (Currently Amended) The electro-optical device according to Claim 7, ~~wherein a connection between the second wiring line and the second electrode lies-lying~~ between the effective region and at least three of a plurality of sides of the substrate.

9. (Currently Amended) The electro-optical device according to Claim 1, ~~wherein a~~ each of the plurality of ~~the~~ first electrodes ~~are each-being~~ included in corresponding pixel electrodes arranged in the effective ~~region-region,~~ and each ~~include-including~~ a plurality of control lines ~~for-transmitting-to transmit signals for-controlling-to control~~ the pixel electrodes, and

a plurality of the control lines ~~are-being~~ arranged such that each control line and at least one of the first wiring lines and the second wiring line do not cross on the substrate.

10. (Currently Amended) The electro-optical device according to Claim 9, ~~wherein the control lines each include-including~~ corresponding scanning lines ~~for-transmitting to transmit~~ scanning signals to the corresponding pixel ~~electrodes-electrodes,~~ and also each ~~include-including~~ corresponding data lines ~~for-transmitting-to transmit~~ data signals to the corresponding pixel electrodes.

11. (Currently Amended) The electro-optical device according to Claim 1, ~~wherein the electro-optical elements each include-including~~ corresponding hole injection/transport layers and corresponding light-emitting layers containing an organic electroluminescent material, each hole injection/transport layer and light-emitting layer being stacked.

12. (Currently Amended) An electronic ~~apparatus-comprising apparatus,~~ comprising:

\_\_\_\_\_ ~~an-the~~ electro-optical device according to Claim 1.

13. (Currently Amended) A wiring substrate for electro-optical devices that each ~~including~~include electro-optical elements that are each disposed between a plurality of corresponding first electrodes and a second electrode acting as a common electrode for the first electrodes, the wiring substrate comprising:

a substrate;

a plurality of first electrodes disposed ~~on a~~on the substrate;

first wiring lines ~~for applying to apply~~to apply power-supply voltages to the first electrodes; and

a second wiring line connected to the second ~~electrode,~~electrode;

~~wherein~~ the second electrode is being disposed outside an effective region having the first electrodes therein, and the area of the second wiring line disposed on the substrate is being larger than the total area of parts of the first wiring lines, the parts being disposed outside the effective region on the substrate.
